## DETAILED ACTION

### *Specification*

1. The disclosure is objected to because of the following informalities: p. 1 of the specification, applicants should complete the continuing data (status of parent as 371 of PCT/US99/13743).

Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 contains the trademark/trade name KEVLAR. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe aromatic polyamide material and, accordingly, the identification/description is indefinite.

### *Claim Rejections - 35 USC § 103*

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1733

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Published PCT Application WO 98/54008 A1 in view of Wallace (2,625,981).

WO 98/54008 A1 discloses a composite ply structure similar to the claimed composite ply structure but does not disclose precuring the joint between the primary ply and ply extensions (description p. 3 line 5 - p. 14 line 25); however, it is well known to precure overlapping portions in tires to prevent slippage during shaping and curing of the tire blank, as evidenced by Wallace (col. 2 line 28 - col. 4 line 18) for example. It would therefore have been obvious to one of ordinary skill in the art to precure the joint between the primary ply and ply extensions in the above composite ply structure in order to prevent slippage during shaping and curing of the tire blank. As to claim 2, a certain width of the overlap joint is required in order to provide a sufficiently strong bond, therefore it would have been obvious to one of ordinary skill in the art to optimize the overlap joint width in the above composite ply structure to assure a sufficiently strong bond (overlap joint width is thus a result effective variable suitable for optimizing by one of ordinary skill in the art, MPEP 2144.05).
